If the wind is too weak, it won't start; if it's too strong, it must stop to avoid damage. In this article, we explain the four key wind speed levels that ...

Far less wind power would be built if subsidies, credits and mandates were removed. Politicians need to reconsider support for environmentally ...

Wind energy offers many advantages, which explains why it's one of the fastest-growing energy sources in the world. To further expand wind energy's ...

But when extreme weather and very strong winds hit, turbines sometimes need to be shut off. All modern wind turbines are set to stop ...

In previous research, Keith and co-authors modeled the generating capacity of large-scale wind farms and concluded that real-world wind power ...

Prolonged low-wind events, termed wind droughts, threaten wind turbine electricity generation, yet their future trajectories remain poorly understood.

We will explain why we see wind turbines stopped even though there is enough wind to generate electricity.

Wind power has become a hot topic in many countries. Like all forms of power production, wind power plants affect people and the environment. Unfortunately, the debate is often characterised by ...

In less than a decade, the global average wind speed has increased from about 7 mph to about 7.4 mph. For the average wind turbine, that ...

Con 2: Wind power is too limited, in use and location. Wind power is heavily subsidized by the government to keep costs low, but what the public ...
